Education

UniCEUB - Systems Analysis and Development

Brasília/DF Brazil

2022 – 2025

Bachelor

Agile Methods, Software Development, Design Patterns, UML, Algorithms, SQL, Mobile Development (Android), Software Requirements Analysis, Software Architecture, Quality Assurance.

Experience

Professional Experience

- **Back-End Developer** | S2 Tecnologia | Brasília, Brazil | November 2025 – May 2026
 - Developed and maintained two SaaS products in Laravel 11 (PHP 8.2+): an ERP/PCP system for food production and an agency management platform, using MySQL, Redis, and async job queues.
 - Built the full financial module (accounts payable/receivable, cash flow, bank slips), including a database migration adding 20+ columns and fixing redirect flows and validation logic.
 - Developed the PCP (Production Planning & Control) module with automatic batch code generation (e.g., LT-01-241215-PRO-001) and end-to-end traceability from raw materials to finished goods.
 - Built an automated Daily Order Report (RDP) email system with PDF generation via DomPDF, async dispatch via Laravel Jobs, and recipient management with Select2/AJAX autocomplete.
 - Developed multi-tab Excel sales reports (Maatwebsite\Excel) integrating data from multiple sources with advanced filtering by period, channel, and product.
 - Integrated the WhatsApp Business API with a template management system featuring real-time character counting and variable highlighting; and the NuvemShop API to sync e-commerce orders with the ERP.
 - Wrote unit and integration tests with PHPUnit covering batch/lot models, supplier quotations, XML parser, and supplier-input integrations; configured an in-memory SQLite test environment.
 - Conducted manual QA cycles documenting 24+ bugs in structured HTML reports across PCP, financial, editorial calendar, and analytics modules; standardized Blade UI components (Bootstrap modals, collapsible filters, badges) across multiple views.

- **IT Governance Analyst** | Caixa Econômica Federal | Brasília, Brazil December 2024 – Present
 - Analyze and manage a portfolio of IT vendor contracts valued at over R\$ [Amount], ensuring compliance with technical requirements and budgetary constraints.
 - Collaborate with cross-functional teams to develop the annual IT budget, tracking departmental spending and identifying opportunities for cost optimization.
 - Prepare detailed financial reports and presentations on IT expenditures for senior management, providing key insights for strategic decision-making.
 - Assist in the development and enforcement of IT governance policies to improve efficiency and mitigate risk across the organization.
- **Law Firm Data Extraction Engine** | *Java 24, Selenium WebDriver, Apache POI, Lombok, Jackson, Maven, Reflections*
 - Built a data extraction pipeline using Selenium WebDriver to scrape lawyer profiles from 100+ global law firm websites, handling sites with distinct HTML structures per target.
 - Led a full architectural refactoring following SOLID principles: centralized continent configuration in a thread-safe Singleton (ContinentConfigManager), implemented Builder patterns (FirmBuilder, FirmBuilderByPage, FirmBuilderByNewPage), and created custom Java annotations (@FirmInfo) to add new target sites without modifying core logic.
 - Implemented JSON-driven continent configuration to decouple runtime behavior from code, enabling granular control over which firms to process without recompiling.
 - Developed a Selenium-based email deduplication validator (Singleton) with persistent session management, auto-login, retry logic, and automatic WebDriver recovery on authentication failures.
 - Automated structured data export to .xlsx files using Apache POI, eliminating 10+ hours of manual data entry per week.
 - Designed a Maven multi-module architecture (core + firms) with ~1,560 scraper classes organized across 6 continents (Africa, Americas, Asia, Europe, Oceania), using Java Reflection for automatic firm discovery without manual registration.

Personal Projects

Seminary Registration Automation | *Python, Selenium WebDriver, Requests, Unidecode*

- Built a CLI automation tool with an interactive menu to manage event registrations and download participant badge PDFs from a church administration web portal.
- Structured into 7 specialized modules (login, seminary selection, participant insertion, PDF download via Requests) following high cohesion and low coupling principles.

- Automated PDF badge downloads with automatic naming and directory organization by participant and event into structured local archives.

Full-Stack Project Portfolio | *React.js, JavaScript, Python, Docker, HTML5, CSS3*

- Containerized the full-stack application (frontend and backend) using Docker, ensuring consistent development and deployment environments.
- Developed a Python-based REST API to serve project data, handle requests, and manage application logic.
- Built a responsive and dynamic web application with a component-based architecture using React.js.
- Engineered reusable UI components and implemented front-end features like real-time search and tag-based filtering to enhance user experience.

E-commerce App Prototype | *Flutter, Dart, Firebase*

- Developed a prototype e-commerce mobile app featuring user authentication, a dynamic product catalog, and a shopping cart using Firebase and Cloud Firestore.
- Managed app-wide state efficiently using the Provider pattern for a clean and scalable architecture.
- Implemented robust user input validation and form management for user registration and login flows.

Weather Forecast App | *Flutter, Dart, BLoC, REST APIs*

- Built a cross-platform weather app that consumes a third-party REST API (e.g., OpenWeatherMap) to deliver real-time weather data based on the user's geolocation.
- Structured the application using the BLoC (Business Logic Component) pattern for a clear separation between business logic and UI.
- Designed a clean and intuitive interface that clearly visualizes current weather conditions and future forecasts.

Responsive Mobile Dashboard | *Flutter, Dart*

- Designed and built a responsive, cross-platform dashboard application from a single Flutter codebase.
- Implemented a modern UI following Material Design principles that adapts seamlessly to various screen sizes, including mobile phones and tablets.

AI-Assisted Development & Prompt Engineering | *Claude (Anthropic), MCP, Agent Skills, Cowork*

- Used Claude as a development co-pilot: code generation and refactoring (PHP/Laravel, Java), complex debugging, architecture decisions, and logic review on real production projects.

- Worked with the Skills system (Agent Skills open standard): deployed official skills for document creation (docx, pdf, pptx, xlsx), file reading, and UI design workflows, leveraging progressive context disclosure to optimize token usage.
- Configured and operated MCP (Model Context Protocol) integrations: direct filesystem access for code manipulation, Apple Notes for knowledge management, Google Drive and Gmail for document workflows.
- Built structured prompt templates for recurring development tasks (UI standardization, test generation, code review), reducing iteration cycles and ensuring consistent output quality.
- Used Cowork with scheduled tasks for autonomous file management and recurring automations; and Claude in Chrome for browser-side debugging integrated into the development cycle.

Frontend Mentor Challenges | *HTML5, CSS3, JavaScript*

- Completed over 10 challenges, translating professional design mockups into pixel-perfect, fully responsive web pages.
- Enhanced CSS and JavaScript skills by tackling complex layouts, DOM manipulation, and interactive UI elements.
